John Carlo Santos

San Francisco Bulakan, Bulacan • santos.karlo@outlook.com • 09938650372
LinkedIn: linkedin.com/in/kuyacarlo | GitHub: github.com/kuya-carlo

Skills

Languages: Python, TypeScript/JavaScript, Go, Dart, SQL, Bash/Shell
Backend and AI: FastAPI, LangGraph, Model Context Protocol (MCP / FastMCP), Agentic AI Workflows, REST APIs
Data Engineering: PostgreSQL, Pandas, NumPy, ETL Pipelines (Bronze-Silver-Gold), Web Scraping (BeautifulSoup4, HTTPX)
Infrastructure and DevOps: Podman (Rootless/Quadlets), Docker, GitHub Actions / Forgejo CI/CD, Linux Hardening (Fedora/Debian), Ansible, pre-commit, Systemd, GPG Signing
Cloud Architecture: Google Cloud Platform (Cloud Run, Compute Engine), AWS (Lambda, S3), Supabase, Cloudflare Workers/Pages
Frontend and Mobile: React, Next.js (App Router), TailwindCSS, Flutter, Material Design

Experience

Millia Labs Pte. Ltd. — Junior Developer (Independent Contractor) **Jul 2026 – Sep 2026**
Developed backend services and integrations, and resolved production issues.
Established separate development and production environments with supporting database migrations and CI/CD workflows.
Migrated CI runners to cloud infrastructure and deployed centralized monitoring across application and infrastructure services.

Seekers Guild — Chief Technology Officer (CTO) **May 2025 – May 2026**
Directed organizational technical infrastructure, centralized authentication architecture, and developer mentorship pipelines impacting active student builder communities.
Standardized organization-wide developer tooling, CI/CD quality gates, and git profile security conventions.

Hackathons

Kasigla (PhasmaFrame) — Community Health Telemetry Build Over Nights with AWS Kiro— 2026
Tech Stack: Astro, React, Hono, SQLite, Protocol Buffers, Docker
Architected an offline-first hypertension monitoring platform enabling patients to record blood pressure readings offline and execute protocol-buffered, device-to-device handoffs to Barangay Health Workers (BHWs).
Implemented structured local SQLite persistence and standardized CSV clinical exports formatted for Rural Health Units (RHU).

AMD Developer Hackathon 2026 — ComplyAIgent AMD / Devpost — 2026
Tech Stack: Go, LangGraph, FastAPI, Next.js, Docker, Gitleaks
Engineered an agentic DevSecOps engine that ingests unstructured regulatory text and compiles policies into fail-closed pre-push git hooks.
Built a high-performance Go CLI pairing Gitleaks regex scanning with entropy scoring for local blocks, and a LangGraph human-in-the-loop interrupt for medium-risk approvals.

BPI DataWave 2025 — WorkSight (Top 3 Finalist) BPI DATAwave — 2025
Tech Stack: Next.js, Python, Agentic AI, Data Analytics
Architected an agentic workplace intelligence platform transforming fragmented metadata into predictive burnout and productivity insights; selected as Top 3 out of 100+ competing teams.

Major League Hacking, Notion MCP Challenge — SAGE MLH Hackathon — 2026
Tech Stack: Python, FastMCP, LangGraph, Notion API
Built an autonomous academic co-pilot using Model Context Protocol (MCP) to ingest CHED-verified university curricula and scaffold tailored semester workspaces in Notion.

Open-Source Projects

Git Profile and SSH Profile (git-profile / ssh-profile) *[Go]*: CLI suite for seamlessly switching multiple Git identities, GPG signing keys, and scoped SSH URLs per repository.
room-tba *[Svelte / Web]*: Automated campus schedule and room vacancy finder for BulSU students under the BulSUTools initiative.

BetterBulakan *[Civic Tech]*: Public utility portal and information transparency hub for the Municipality of Bulakan, Bulacan (betterbulakan.org).
freestack (awesome-freestack) *[Markdown]*: Curated open-source catalog of free developer tools, student unlocks, and startup tiers with commercial terms and limit notes.
v4l2loopback-fedora *[DKMS, Shell]*: Packaging script and DKMS module automation for Video4Linux loopback virtual camera devices on Fedora Linux.
Nutrition API (meal-server) *[FastAPI, Docker]:* High-throughput REST API serving structured nutritional datasets with containerized SQLite.

Speaking Engagements

Git & GitHub Fundamentals — Computer Science Society BulSU
Web Development Basics (HTML & CSS) — Seekers Guild

Leadership & Involvement

Google Cloud Innovator & Community Member | NVIDIA Developer Community Member
Computer Science Society BulSU — Cybersecurity Associate (2026-Present), External Officer *(2025)*
BulSU Microsoft Student Community *— Creatives Officer (2024), Member (2025–Present)*

Education

Bulacan State University Malolos, Bulacan
BS Computer Engineering Expected 2028

Certifications & Trainings

Azure Data Fundamentals & Azure AI Services Workshops *(May 2025, by Pio Balistoy & Ziggy Zulueta)*
Cisco NetAcad — Intro to Cybersecurity *(2025)*
Mastercard Cybersecurity Job Simulation (Forage) *(Apr 2025)*
Google Developer Program — BigLake Qwik Start Lab, Cloud Engineer Learning Path *(CloudSkillsBoost)*
